April 15, 2023

Week 1 (April 15, 2022)

By this week, from the recommendation of the panelists being given already, the researchers already started making the changes by applying it to the paper first, and have thought of a new title to comply to the recommendations. Also started browsing assets and have applied it to the paper as a draft since it is not yet approved. From conceptual and theoretical frameworks, to a drafted statement of the problem until the methodology to be done. Also, some links and related literatures suggesting the recommended change were also been found. The following week, a system should be initially established.

Documentation:

- **Used Visual Studio Code for the development and Messenger for communications**

- **Discord for the meeting and live editing of the paper and browser for searching and browsing**

- **Word for the collaboration in changing the whole paper**
